SEE OFFICE ACTION	ON THE FOLLOWING PAGES

Application/Control Number: 09/434695

Art Unit: 1761

1. Claims 47 and 48 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards

as the invention.

The use of the alternative expression "and/or" is indefinite in claim 47.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness

rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the

manner in which the invention was made.

Claims 29-48 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hagemeister

et al taken together with either one of Ellenbogen et al or Long.

Hagemeister et al discloses preparing a milk product (i.e. from cows) having an increased

amount of omega-3 highly unsaturated fatty acid. However, Hagemeister et al is silent concerning

the omega fatty acid and the use of same in the feed of the cow. However, such use in feeds is

well known as taught, for example, by either one of Ellenbogen et al or Long. Absent a showing

of unexpected results, it would have been obvious to one having ordinary skill in the art at the

time of the invention to have employed same as an art recognized source of omega fatty acids to

be used as an alternative source for producing the products set forth in Hagemeister et al. As for

the strain of organism employed, such would have been a matter of choice within the purview of

one skilled in the art.

Application/Control Number: 09/434695

Art Unit: 1761

The claims call for the particular media to be used for growing the organisms used to

create said omega fatty acids (e.g. fermentation). However, the particular choice of growth media

would have been within the purview of a skilled artisan, and it would have been further obvious to

have employed same as a matter of choice depending, for example, on the cost of same or

availability.

The claim further call for the moisture content of the feed and that same is prepared by

extrusion. However, determining the amount of moisture would have been well within the

purview of one having ordinary skill in the art and obvious to have attained depending on the

particular consistency of the feed desired. As for the use of extrusion, same is notoriously well

known in the preparation of feeds, and it would have been further obvious to have incorporated

same in the preparation of the feed employed in producing the milk as called for in the instant

claims.

3. Any inquiry concerning this communication or earlier communications from the examiner

should be directed to Anthony Weier whose telephone number is (703) 308-3846.
